DETAILED ACTION

1. Original claims 1-7 are pending.

Election/Restrictions

2. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- A. *Bacillus subtilis* genes (claim 1).

Applicant is required, in reply to this action, to elect a single species of *Bacillus subtilis* gene to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: all of the claims are generic since no claim sets forth a specific *Bacillus subtilis* gene.

Art Unit: 1633

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: As the technical feature (*Bacillus subtilis* genes) linking the members does not constitute a technical feature as defined by PCT Rule 13.2, particularly since each of the listed gene type do not share a substantially common property or activity and possess different structures. For example, each gene provides a unique inherent property depending on the gene itself. Thus, the requirement of the unity of the invention is not fulfilled.
